

**FORMERLY UTILIZED SITES REMEDIAL
ACTION PROJECT (FUSRAP)
ST. LOUIS, MISSOURI**

The Formerly Utilized Sites Remedial Action Project (FUSRAP) is an environmental remediation program. It addresses radiological contamination generated by activities of the Manhattan Engineer District and the Atomic Energy Commission (MED/AEC) during development of the atomic weapons in the 1940s and 50s. Its primary objectives are the following:

1. Find and evaluate sites that supported Manhattan Engineer District/Atomic Energy Commission nuclear work (or other sites assigned by Congress) and determine whether they need cleanup and/or control.
2. Clean up or maintain these sites so that they meet current guidelines.
3. Dispose of or stabilize radioactive material in a way that is safe for the public and the environment.
4. Perform all work in compliance with appropriate federal laws and regulations and comply with state and local environmental laws and land-use requirements.
5. Certify the sites for appropriate future use.

As the Community Relations Specialist for the four FUSRAP sites in the St. Louis region, Ms. Taylor Crate designed and implemented a community engagement process that educated and informed local St. Louis residents about the current status of cleanup activities. She also was responsible for the staffing and coordination of the **St. Louis Oversight Community Advisory Board**, a committee of local citizens and public officials that oversee the government's progress toward cleaning up these sites.
